

Concept Assignment 6

Physics 141
Spring, 2013

Dear Class,

We had a two-week hiatus in this because (as no doubt you noted) University Physics has no chapters on vector torque or static equilibrium. It does have fluids and at least some support for oscillations, waves, and gravity so I'm hoping we can make it useful for the rest of the semester.

As before, use the "Got the Concept" questions for self-instruction, and discuss any of the other concept/short questions for which you are not sure of the answers in a help session or recitation.

University Physics: Estimate it! 11-1. Got the Concept 11-1, 11-2, 11-3, 11-4, 11-5, 11-6, 11-7, 11-8. Conceptual Questions: 11.13 Multiple-Choice Questions: 11.16, 11.22, 11.24.
