Contents

Preface to the third edition  xx
Preface to the second edition  xxiii
Preface to the first edition  xxv

1 Preliminary algebra  1
1.1 Simple functions and equations  1
   Polynomial equations; factorisation; properties of roots
1.2 Trigonometric identities  10
   Single angle; compound angles; double- and half-angle identities
1.3 Coordinate geometry  15
1.4 Partial fractions  18
   Complications and special cases
1.5 Binomial expansion  25
1.6 Properties of binomial coefficients  27
1.7 Some particular methods of proof  30
   Proof by induction; proof by contradiction; necessary and sufficient conditions
1.8 Exercises  36
1.9 Hints and answers  39

2 Preliminary calculus  41
2.1 Differentiation  41
   Differentiation from first principles; products; the chain rule; quotients;
   implicit differentiation; logarithmic differentiation; Leibniz' theorem; special
   points of a function; curvature; theorems of differentiation

## CONTENTS

### 5 Partial differentiation 151

5.1 Definition of the partial derivative 151
5.2 The total differential and total derivative 153
5.3 Exact and inexact differentials 155
5.4 Useful theorems of partial differentiation 157
5.5 The chain rule 157
5.6 Change of variables 158
5.7 Taylor’s theorem for many-variable functions 160
5.8 Stationary values of many-variable functions 162
5.9 Stationary values under constraints 167
5.10 Envelopes 173
5.11 Thermodynamic relations 176
5.12 Differentiation of integrals 178
5.13 Exercises 179
5.14 Hints and answers 185

### 6 Multiple integrals 187

6.1 Double integrals 187
6.2 Triple integrals 190
6.3 Applications of multiple integrals 191

*Areas and volumes; masses, centres of mass and centroids; Pappus’ theorems; moments of inertia; mean values of functions*

6.4 Change of variables in multiple integrals 199

*Change of variables in double integrals; evaluation of the integral \( I = \int_{-\infty}^{\infty} e^{-x^2} \, dx \); change of variables in triple integrals; general properties of Jacobians*

6.5 Exercises 207
6.6 Hints and answers 211

### 7 Vector algebra 212

7.1 Scalars and vectors 212
7.2 Addition and subtraction of vectors 213
7.3 Multiplication by a scalar 214
7.4 Basis vectors and components 217
7.5 Magnitude of a vector 218
7.6 Multiplication of vectors 219

*Scalar product; vector product; scalar triple product; vector triple product*
## CONTENTS

### Chapter 7: Equations of lines, planes and spheres
- Equations of lines, planes and spheres 226
- Using vectors to find distances 229
  - Point to line; point to plane; line to line; line to plane
- Reciprocal vectors 233
- Hints and answers 240

### Exercise 7.10 234

### Hints and Answers 7.11 240

### Chapter 8: Matrices and vector spaces

#### Section 8.1: Vector spaces
- Basis vectors; inner product; some useful inequalities 242

#### Section 8.2: Linear operators

#### Section 8.3: Matrices

#### Section 8.4: Basic matrix algebra
- Matrix addition; multiplication by a scalar; matrix multiplication 250

#### Section 8.5: Functions of matrices

#### Section 8.6: The transpose of a matrix

#### Section 8.7: The complex and Hermitian conjugates of a matrix

#### Section 8.8: The trace of a matrix

#### Section 8.9: The determinant of a matrix
  - Properties of determinants 259

#### Section 8.10: The inverse of a matrix

#### Section 8.11: The rank of a matrix

#### Section 8.12: Special types of square matrix
  - Diagonal; triangular; symmetric and antisymmetric; orthogonal; Hermitian and anti-Hermitian; unitary; normal 268

#### Section 8.13: Eigenvectors and eigenvalues
- Of a normal matrix; of Hermitian and anti-Hermitian matrices; of a unitary matrix; of a general square matrix 272

#### Section 8.14: Determination of eigenvalues and eigenvectors
  - Degenerate eigenvalues 280

#### Section 8.15: Change of basis and similarity transformations

#### Section 8.16: Diagonalisation of matrices

#### Section 8.17: Quadratic and Hermitian forms
  - Stationary properties of the eigenvectors; quadratic surfaces 288

#### Section 8.18: Simultaneous linear equations
  - Range; null space; N simultaneous linear equations in N unknowns; singular value decomposition 292

#### Section 8.19: Exercises 307

### Hints and Answers 8.20 314

### Chapter 9: Normal modes

#### Section 9.1: Typical oscillatory systems

#### Section 9.2: Symmetry and normal modes

12.2 The Fourier coefficients 417
12.3 Symmetry considerations 419
12.4 Discontinuous functions 420
12.5 Non-periodic functions 422
12.6 Integration and differentiation 424
12.7 Complex Fourier series 424
12.8 Parseval’s theorem 426
12.9 Exercises 427
12.10 Hints and answers 431

13 Integral transforms 433
13.1 Fourier transforms 433
The uncertainty principle; Fraunhofer diffraction; the Dirac δ-function; relation of the δ-function to Fourier transforms; properties of Fourier transforms; odd and even functions; convolution and deconvolution; correlation functions and energy spectra; Parseval’s theorem; Fourier transforms in higher dimensions
13.2 Laplace transforms 453
Laplace transforms of derivatives and integrals; other properties of Laplace transforms
13.3 Concluding remarks 459
13.4 Exercises 460
13.5 Hints and answers 466

14 First-order ordinary differential equations 468
14.1 General form of solution 469
14.2 First-degree first-order equations 470
Separable-variable equations; exact equations; inexact equations, integrating factors; linear equations; homogeneous equations; isobaric equations; Bernoulli’s equation; miscellaneous equations
14.3 Higher-degree first-order equations 480
Equations soluble for p; for x; for y; Clairaut’s equation
14.4 Exercises 484
14.5 Hints and answers 488

15 Higher-order ordinary differential equations 490
15.1 Linear equations with constant coefficients 492
Finding the complementary function \(y_c(x)\); finding the particular integral \(y_p(x)\); constructing the general solution \(y(x) = y_c(x) + y_p(x)\); linear recurrence relations; Laplace transform method
15.2 Linear equations with variable coefficients 503
The Legendre and Euler linear equations; exact equations; partially known complementary function; variation of parameters; Green’s functions; canonical form for second-order equations
15.3 General ordinary differential equations 518

Dependent variable absent; independent variable absent; non-linear exact equations; isobaric or homogeneous equations; equations homogeneous in \( x \) or \( y \) alone; equations having \( y = Ae^x \) as a solution

15.4 Exercises 523

15.5 Hints and answers 529

16 Series solutions of ordinary differential equations 531

16.1 Second-order linear ordinary differential equations 531

Ordinary and singular points

16.2 Series solutions about an ordinary point 535

16.3 Series solutions about a regular singular point 538

Distinct roots not differing by an integer; repeated root of the indicial equation; distinct roots differing by an integer

16.4 Obtaining a second solution 544

The Wronskian method; the derivative method; series form of the second solution

16.5 Polynomial solutions 548

16.6 Exercises 550

16.7 Hints and answers 553

17 Eigenfunction methods for differential equations 554

17.1 Sets of functions 556

Some useful inequalities

17.2 Adjoint, self-adjoint and Hermitian operators 559

17.3 Properties of Hermitian operators 561

Reality of the eigenvalues; orthogonality of the eigenfunctions; construction of real eigenfunctions

17.4 Sturm–Liouville equations 564

Valid boundary conditions; putting an equation into Sturm–Liouville form

17.5 Superposition of eigenfunctions: Green’s functions 569

17.6 A useful generalisation 572

17.7 Exercises 573

17.8 Hints and answers 576

18 Special functions 577

18.1 Legendre functions 577

General solution for integer \( \ell \); properties of Legendre polynomials

18.2 Associated Legendre functions 587

18.3 Spherical harmonics 593

18.4 Chebyshev functions 595

18.5 Bessel functions 602

General solution for non-integer \( \nu \); general solution for integer \( \nu \); properties of Bessel functions
## CONTENTS

18.6 Spherical Bessel functions ................................................. 614
18.7 Laguerre functions ......................................................... 616
18.8 Associated Laguerre functions ........................................ 621
18.9 Hermite functions ......................................................... 624
18.10 Hypergeometric functions .............................................. 628
18.11 Confluent hypergeometric functions ................................ 633
18.12 The gamma function and related functions ....................... 635
18.13 Exercises ...................................................................... 640
18.14 Hints and answers .......................................................... 646

19 Quantum operators ............................................................. 648
  19.1 Operator formalism ....................................................... 648
    Commutators ................................................................ 649
  19.2 Physical examples of operators ....................................... 656
    Uncertainty principle; angular momentum; creation and annihilation operators
  19.3 Exercises ...................................................................... 671
  19.4 Hints and answers .......................................................... 674

20 Partial differential equations: general and particular solutions .... 675
  20.1 Important partial differential equations ............................ 676
    The wave equation; the diffusion equation; Laplace’s equation; Poisson’s equation; Schrödinger’s equation
  20.2 General form of solution ................................................ 680
  20.3 General and particular solutions ...................................... 681
    First-order equations; inhomogeneous equations and problems; second-order equations
  20.4 The wave equation .......................................................... 693
  20.5 The diffusion equation .................................................... 695
  20.6 Characteristics and the existence of solutions .................... 699
    First-order equations; second-order equations
  20.7 Uniqueness of solutions .................................................. 705
  20.8 Exercises ...................................................................... 707
  20.9 Hints and answers .......................................................... 711

21 Partial differential equations: separation of variables and other methods ... 713
  21.1 Separation of variables: the general method ....................... 713
  21.2 Superposition of separated solutions ............................... 717
  21.3 Separation of variables in polar coordinates ....................... 725
    Laplace’s equation in polar coordinates; spherical harmonics; other equations in polar coordinates; solution by expansion; separation of variables for inhomogeneous equations
  21.4 Integral transform methods ............................................. 747
CONTENTS

21.5 Inhomogeneous problems – Green’s functions
Similarities to Green’s functions for ordinary differential equations; general
boundary-value problems; Dirichlet problems; Neumann problems
751

21.6 Exercises
767

21.7 Hints and answers
773

22 Calculus of variations
775
22.1 The Euler–Lagrange equation
776
22.2 Special cases
777
F does not contain y explicitly; F does not contain x explicitly
22.3 Some extensions
781
Several dependent variables; several independent variables; higher-order
derivatives; variable end-points
22.4 Constrained variation
785
22.5 Physical variational principles
787
Fermat’s principle in optics; Hamilton’s principle in mechanics
22.6 General eigenvalue problems
790
22.7 Estimation of eigenvalues and eigenfunctions
792
22.8 Adjustment of parameters
795
22.9 Exercises
797
22.10 Hints and answers
801

23 Integral equations
803
23.1 Obtaining an integral equation from a differential equation
803
23.2 Types of integral equation
804
23.3 Operator notation and the existence of solutions
805
23.4 Closed-form solutions
806
Separable kernels; integral transform methods; differentiation
23.5 Neumann series
813
23.6 Fredholm theory
815
23.7 Schmidt–Hilbert theory
816
23.8 Exercises
819
23.9 Hints and answers
823

24 Complex variables
824
24.1 Functions of a complex variable
825
24.2 The Cauchy–Riemann relations
827
24.3 Power series in a complex variable
830
24.4 Some elementary functions
832
24.5 Multivalued functions and branch cuts
835
24.6 Singularities and zeros of complex functions
837
24.7 Conformal transformations
839
24.8 Complex integrals
845
24.9 Cauchy’s theorem 849
24.10 Cauchy’s integral formula 851
24.11 Taylor and Laurent series 853
24.12 Residue theorem 858
24.13 Definite integrals using contour integration 861
24.14 Exercises 867
24.15 Hints and answers 870

25 Applications of complex variables 871
25.1 Complex potentials 871
25.2 Applications of conformal transformations 876
25.3 Location of zeros 879
25.4 Summation of series 882
25.5 Inverse Laplace transform 884
25.6 Stokes’ equation and Airy integrals 888
25.7 WKB methods 895
25.8 Approximations to integrals 905
   Level lines and saddle points; steepest descents; stationary phase
25.9 Exercises 920
25.10 Hints and answers 925

26 Tensors 927
26.1 Some notation 928
26.2 Change of basis 929
26.3 Cartesian tensors 930
26.4 First- and zero-order Cartesian tensors 932
26.5 Second- and higher-order Cartesian tensors 935
26.6 The algebra of tensors 938
26.7 The quotient law 939
26.8 The tensors $\delta_{ij}$ and $\epsilon_{ijk}$ 941
26.9 Isotropic tensors 944
26.10 Improper rotations and pseudotensors 946
26.11 Dual tensors 949
26.12 Physical applications of tensors 950
26.13 Integral theorems for tensors 954
26.14 Non-Cartesian coordinates 955
26.15 The metric tensor 957
26.16 General coordinate transformations and tensors 960
26.17 Relative tensors 963
26.18 Derivatives of basis vectors and Christoffel symbols 965
26.19 Covariant differentiation 968
26.20 Vector operators in tensor form 971
26.21 Absolute derivatives along curves 975
26.22 Geodesics 976
26.23 Exercises 977
26.24 Hints and answers 982

27  Numerical methods 984
27.1 Algebraic and transcendental equations 985
Rearrangement of the equation; linear interpolation; binary chopping; Newton–Raphson method
27.2 Convergence of iteration schemes 992
27.3 Simultaneous linear equations 994
Gaussian elimination; Gauss–Seidel iteration; tridiagonal matrices
27.4 Numerical integration 1000
Trapezium rule; Simpson’s rule; Gaussian integration; Monte Carlo methods
27.5 Finite differences 1019
27.6 Differential equations 1020
Difference equations; Taylor series solutions; prediction and correction; Runge–Kutta methods; isoclines
27.7 Higher-order equations 1028
27.8 Partial differential equations 1030
27.9 Exercises 1033
27.10 Hints and answers 1039

28  Group theory 1041
28.1 Groups 1041
Definition of a group; examples of groups
28.2 Finite groups 1049
28.3 Non-Abelian groups 1052
28.4 Permutation groups 1056
28.5 Mappings between groups 1059
28.6 Subgroups 1061
28.7 Subdividing a group 1063
Equivalence relations and classes; congruence and cosets; conjugates and classes
28.8 Exercises 1070
28.9 Hints and answers 1074

29  Representation theory 1076
29.1 Dipole moments of molecules 1077
29.2 Choosing an appropriate formalism 1078
29.3 Equivalent representations 1084
29.4 Reducibility of a representation 1086
29.5 The orthogonality theorem for irreducible representations 1090
29.6 Characters
Orthogonality property of characters

29.7 Counting irreps using characters
Summation rules for irreps

29.8 Construction of a character table

29.9 Group nomenclature

29.10 Product representations

29.11 Physical applications of group theory
Bonding in molecules; matrix elements in quantum mechanics; degeneracy of normal modes; breaking of degeneracies

29.12 Exercises

29.13 Hints and answers

30 Probability

30.1 Venn diagrams

30.2 Probability
Axioms and theorems; conditional probability; Bayes’ theorem

30.3 Permutations and combinations

30.4 Random variables and distributions
Discrete random variables; continuous random variables

30.5 Properties of distributions
Mean; mode and median; variance and standard deviation; moments; central moments

30.6 Functions of random variables

30.7 Generating functions
Probability generating functions; moment generating functions; characteristic functions; cumulant generating functions

30.8 Important discrete distributions
Binomial; geometric; negative binomial; hypergeometric; Poisson

30.9 Important continuous distributions
Gaussian; log-normal; exponential; gamma; chi-squared; Cauchy; Breit–Wigner; uniform

30.10 The central limit theorem

30.11 Joint distributions
Discrete bivariate; continuous bivariate; marginal and conditional distributions

30.12 Properties of joint distributions
Means; variances; covariance and correlation

30.13 Generating functions for joint distributions

30.14 Transformation of variables in joint distributions

30.15 Important joint distributions
Multinomial; multivariate Gaussian

30.16 Exercises

30.17 Hints and answers

Index

Where the discussion of a topic runs over two consecutive pages, reference is made only to the first of these. For discussions spread over three or more pages the first and last page numbers are given; these references are usually to the major treatment of the corresponding topic. Isolated references to a topic, including those appearing on consecutive pages, are listed individually. Some long topics are split, e.g. ‘Fourier transforms’ and ‘Fourier transforms, examples’. The letter ‘n’ after a page number indicates that the topic is discussed in a footnote on the relevant page.

A, B, one-dimensional irreps, 1090, 1102, 1109
Abelian groups, 1044
absolute convergence of series, 124, 831

sphere, vector equation of, 228
spherical Bessel functions, 615, 741
of first kind \(j_\ell(z)\), 615
of second kind \(n_\ell(z)\), 615
spherical harmonics \(Y_\ell^m(\theta, \phi)\), 593–595
addition theorem, 594
spherical polar coordinates, 361–363
area element, 362
basis vectors, 362
length element, 362
vector operators, 361–363
volume element, 205, 362
spur of a matrix, see trace of a matrix
square matrices, 249
square, symmetries of, 1100
square-wave, Fourier series for, 418
stagnation points of fluid flow, 873
standard deviation \(\sigma\), 1146
of sample, 1224
standing waves, 693

1329
INDEX

stationary phase, method of, 912–920
stationary values
  of functions of
    one real variable, 50–52
    several real variables, 162–167
  of integrals, 776
  under constraints, see Lagrange undetermined multipliers
statistical tests, and hypothesis testing , 1278
  describing data, 1222–1229
  estimating parameters, 1229–1255, 1298
  steepest descents, method of, 908–912
Stirling’s
  approximation, 637, 1185
  asymptotic series, 637
B Stokes constant, in Stokes phenomenon, 904
B Stokes line, 899, 903
Stokes phenomenon, 903
  dominant term, 904
  Stokes constant, 904
  subdominant term, 904
Stokes’ equation, 643, 799, 888–894
  Airy integrals, 890–894
  qualitative solutions, 888
  series solution, 890
Stokes’ theorem, 388, 406–409
  for tensors, 955
  physical applications, 408
  related theorems, 407
strain tensor, 953
stratified sampling, in Monte Carlo methods, 1012
streamlines and complex potentials, 873
stress tensor, 953
stress waves, 980
string
  loaded, 798
  plucked, 770
  transverse vibrations of, 676, 789
Student’s t-distribution
  normalisation, 1286
  plots, 1287
Student’s t-test, 1284–1290
  comparison of means, 1289
  critical points table, 1288
  one- and two-tailed confidence limits, 1288
Sturm–Liouville equations, 564
  boundary conditions, 564
  examples, 566
    associated Laguerre, 566, 622
    associated Legendre, 566, 590, 591
    Bessel, 566, 608–611
    Chebyshev, 566, 599
    confluent hypergeometric, 566
    Hermite, 566
    hypergeometric, 566
    Laguerre, 566, 619
    Legendre, 566, 583
  manipulation to self-adjoint form, 565–568
  natural interval, 565, 567
  two independent variables, 801
  variational approach, 790–795
  weight function, 790
  zeros of eigenfunctions, 573
  subdominant term, in Stokes phenomenon, 904
  subgroups, 1061–1063
  index, 1066
  normal, 1063
  order, 1061
  Lagrange’s theorem, 1065
  proper, 1061
  trivial, 1061
  substitution, 123
  superposition methods
    for ODE, 554, 568–571
    for PDE, 717–724
  surface integrals
    and divergence theorem, 401
    Archimedean upthrust, 396, 410
    of scalars, vectors, 389–396
    physical examples, 395
  surfaces, 345–347

    cone, 74
    solid, and Pappus’ theorem, 195–197
    sphere, 346
    coordinate curves, 346
    normal to, 346, 350
    of revolution, 74
    parametric equations, 345
    quadratic, 292
    tangent plane, 346
    SVD, see singular value decomposition
    symmetric functions, 416
    and Fourier series, 419
    and Fourier transforms, 445
    symmetric matrices, 270
    general properties, see Hermitian matrices

1330
symmetric tensors, 938
symmetry in equivalence relations, 1064
symmetry operations
  on molecules, 1041
  order of application, 1044
$t$-test, see Student’s $t$-test
$t$ substitution, 65
tan$^{-1}$ x, Maclaurin series for, 140
tangent planes to surfaces, 346
tangent vectors to space curves, 342
tanh, hyperbolic tangent, see hyperbolic functions
Taylor series, 136–141
  and finite differences, 1019, 1026
  and Taylor’s theorem, 136–139, 853
  approximation errors, 139
  as solution of ODE, 1023
  for functions of a complex variable, 853–855
  for functions of several real variables, 160–162
  remainder term, 138
  required properties, 136
  standard forms, 136
tensors, see Cartesian tensors and Cartesian tensors, particular and general tensors
test statistic, 1278
tetrahedral group, 1115
tetrahedron
  mass of, 194
  volume of, 192
thermodynamics
  first law of, 176
  Maxwell’s relations, 176–178
top-hat function, see rectangular distribution
torque, vector representation of, 223
torsion of space curves, 342
total derivative, 154
total differential, 154
trace of a matrix, 258
  and second-order tensors, 939
  as sum of eigenvalues, 280, 287
  invariance under similarity transformations, 284, 1092
  trace formula, 287
transcendental equations, 986
transformation matrix, 283, 289
transformations
  active and passive, 948
  conformal, 839–844
  coordinate, see coordinate transformations
  similarity, see similarity transformations
  transforms, integral, see integral transforms and
  Fourier transforms and Laplace transforms
  transients, and the diffusion equation, 723
  transitivity in equivalence relations, 1064
  transpose of a matrix, 250, 255
  product rule, 256
transverse vibrations
  membrane, 677, 739, 768
rod, 769
string, 676
trapezium rule, 1002–1004
trial functions
  for eigenvalue estimation, 793
  for particular integrals of ODE, 494
  trials, 1119
triangle inequality, 246, 559
triangle, centroid of, 216
triangular matrices, 269
tridiagonal matrices, 998–1000, 1030, 1033
trigonometric identities, 10–15
triple integrals, see multiple integrals
  triple scalar product, see scalar triple product
  triple vector product, see vector triple product
turning point, 50
uncertainty principle (Heisenberg), 435–437
  from commutator, 664
undetermined coefficients, method of, 494
undetermined multipliers, see Lagrange
uniqueness theorem
  Klein–Gordon equation, 711
  Laplace equation, 741
  Poisson equation, 705–707
unit step function, see Heaviside function
